

The photo was taken during the summer on the River Danube in Lom, Bulgaria. The photo shows geodetic measurements being performed with GPS Trimble R6 to determine the lowest point of the relief of the city. The measurement process took two weeks and the results were used to create a 3D city model for planning and designing drainage and road infrastructure. The level of the River Danube was also measured over a period of several months in order to produce a 3D model of its course.
