

# TECHNOMETRICS

Volume 59, Number 1, February 2017

- Monotonic Metamodels for Deterministic Computer Experiments**  
Matthias Hwai Yong Tan 1
- Sliced Full Factorial-Based Latin Hypercube Designs as a Framework for a Batch Sequential Design Algorithm**  
Weitao Duan, Bruce E. Ankenman, Susan M. Sanchez, and Paul J. Sanchez 11
- Joint Identification of Location and Dispersion Effects in Unreplicated Two-Level Factorials**  
Andrew J. Henrey and Thomas M. Loughin 23
- Design and Analysis of Experiments on Nonconvex Regions**  
Matthew T. Pratola, Ofir Harari, Derek Bingham, and Gwenn E. Flowers 36
- Benefits and Fast Construction of Efficient Two-Level Foldover Designs**  
Anna Errore, Bradley Jones, William Li, and Christopher J. Nachtsheim 48
- Optimization of Multi-Fidelity Computer Experiments via the EQIE Criterion**  
Xu He, Rui Tuo, and C. F. Jeff Wu 58
- Two-Level Designs to Estimate All Main Effects and Two-Factor Interactions**  
Pieter T. Eendebak and Eric D. Schoen 69
- Calibration of Stochastic Computer Simulators Using Likelihood Emulation**  
Jeremy E. Oakley and Benjamin D. Youngman 80
- Nonstationary Gaussian Process Models Using Spatial Hierarchical Clustering from Finite Differences**  
Matthew J. Heaton, William F. Christensen, and Maria A. Terres 93
- Anomaly Detection in Images With Smooth Background via Smooth-Sparse Decomposition**  
Hao Yan, Kamran Paynabar, and Jianjun Shi 102
- Estimation of Field Reliability Based on Aggregate Lifetime Data**  
Piao Chen and Zhi-Sheng Ye 115
- Book Reviews** 126
- Clarifications for “Fast Computing for Distance Covariance” by Xiaoming Huo and Gábor J. Székely** 134
