

# Computational Statistics

Volume 28 · Number 1 · 2013

(Contents continued)

## ORIGINAL PAPERS

- On maximum likelihood estimation of a Pareto mixture**  
M. Bee · R. Benedetti · G. Espa 161
- The influence of heteroskedastic variances on cointegration tests: A comparison using Monte Carlo simulations**  
D. Maki 179
- Two advanced methods for adjusting the main coefficient in logistic regression**  
Y.-W. Yang · C.Y. Fu 199
- Interval estimation for fitting straight line when both variables are subject to error**  
J.-R. Tsai 219
- Algebraic generation of minimum size orthogonal fractional factorial designs: an approach based on integer linear programming**  
R. Fontana 241
- An efficient simulation algorithm for the generalized von Mises distribution of order two**  
S. Pfyffer · R. Gatto 255
- Density comparison for independent and right censored samples via kernel smoothing**  
P. Martínez-Cambor · J. de Uña-Álvarez 269
- Saddlepoint approximations for tests of dispersion**  
E.F. Abd-Elfattah 289
- Efficient computation of generalized median estimators**  
S.L. Wilde · S.D. Grimshaw 307
- A weighted strategy to handle likelihood uncertainty in Bayesian inference**  
C. Agostinelli · L. Greco 319
- Percentile estimation based on the power-normal distribution**  
K. Maruo · M. Goto 341
- A spatial scan statistic for case event data based on connected components**  
L. Cucala · C. Demattei · P. Lopes · A. Ribeiro 357
- Simultaneous Gaussian model-based clustering for samples of multiple origins**  
A. Lourme · C. Biernacki 371
