

# Scientific Computing

Volume 34, Number 6

Articles originally published online November 2012 to December 2012

## CONTENTS

### Methods and Algorithms for Scientific Computing

- A2837 Adaptive Hessian-Based Nonstationary Gaussian Process Response Surface Method for Probability Density Approximation with Application to Bayesian Solution of Large-Scale Inverse Problems  
*Tan Bui-Thanh, Omar Ghattas, and David Higdon*
- A2872 Additive Schur Complement Approximation and Application to Multilevel Preconditioning  
*Johannes Kraus*
- A2896 A Conservative Mesh-Free Scheme and Generalized Framework for Conservation Laws  
*Edmond Kwan-yu Chiu, Qiqi Wang, Rui Hu, and Antony Jameson*
- A2917 Identification of Polynomial Chaos Representations in High Dimension from a Set of Realizations  
*G. Perrin, C. Soize, D. Duhamel, and C. Funfschilling*
- A2946 Computation of Failure Probability Subject to Epistemic Uncertainty  
*Jing Li and Dongbin Xiu*
- A2965 Efficient and Accurate Algorithms for the Computation and Inversion of the Incomplete Gamma Function Ratios  
*Amparo Gil, Javier Segura, and Nico M. Temme*
- A2982 A Fourth-Order Accurate Embedded Boundary Method for the Wave Equation  
*Daniel Appelö and N. Anders Petersson*
- A3009 Stability of Barycentric Interpolation Formulas for Extrapolation  
*Marcus Webb, Lloyd N. Trefethen, and Pedro Gonnet*
- A3016 Fast Solution of Parabolic Problems in the Tensor Train/Quantized Tensor Train Format with Initial Application to the Fokker-Planck Equation  
*S. V. Dolgov, B. N. Khoromskij, and I. V. Oseledets*
- A3039 Fast Summation by Interval Clustering for an Evolution Equation with Memory  
*William McLean*
- A3057 Evaluation of 3-D Singular and Nearly Singular Integrals in Galerkin BEM for Thin Layers  
*Marc Lenoir and Nicolas Salles*
- A3079 Parallel Auxiliary Space AMG Solver for  $H(\text{div})$  Problems  
*Tzanio V. Kolev and Panayot S. Vassilevski*

### Computational Methods in Science and Engineering

- B711 Efficient Two-Scale Optimization of Manufacturable Graded Structures  
*Fabian Schury, Michael Stingl, and Fabian Wein*
- B734 Micro-Macro Schemes for Kinetic Equations Including Boundary Layers  
*Mohammed Lemou and Florian Méhats*
- B761 Multilevel Monte Carlo Finite Volume Methods for Shallow Water Equations with Uncertain Topography in Multi-dimensions  
*S. Mishra, Ch. Schwab, and J. Šukys*
- B785 A Robust Preconditioned MinRes Solver for Distributed Time-Periodic Eddy Current Optimal Control Problems  
*Michael Kolmbauer and Ulrich Langer*
- B810 Invariant Discretization Schemes for the Shallow-Water Equations  
*Alexander Bihlo and Roman O. Popovych*

Continued on inside back cover

*Continued from back cover*

B840 A Finite Volume Preserving Scheme on Nonuniform Meshes and for Multidimensional Coalescence  
*L. Forestier-Coste and S. Mancini*

B861 High-Resolution Finite Volume Central Schemes for a Compressible Two-Phase Model  
*Giuseppe La Spina and Mattia de' Michieli Vitturi*

B881 Multidimensional Adaptive Relevance Vector Machines for Uncertainty Quantification  
*Ilias Bilonis and Nicholas Zabaras*

B909 An Adaptive, High-Order Phase-Space Remapping for the Two Dimensional Vlasov-Poisson Equations  
*Bei Wang, Greg Miller, and Phil Colella*

### **Software and High-Performance Computing**

C249 Toward a High Performance Tile Divide and Conquer Algorithm for the Dense Symmetric Eigenvalue Problem  
*Azzam Haidar, Hatem Ltaief, and Jack Dongarra*

C277 **Author Index**
