On the cover: Temperature map of astronomical dust located in a region within our galaxy that is forming stars, derived using an Ancillarity–Sufficiency Interweaving Strategy applied to data from the Herschel Space Observatory. The spatial distribution and correlations of astrophysical quantities probed by dust, such as temperature, provide important information on the formation of stars and planets. Art adapted from work by B. C. Kelly, R. Shetty, A. M. Stutz, J. Kauffmann, A. A. Goodman, and R. Launhardt.
