

JOURNAL OF APPLIED STATISTICS

Volume 37 Numbers 1–2 January–February 2010

CONTENTS

- Analyzing survival data with highly negatively skewed distribution: The Gompertz-sinh family
Kahadawala Cooray and Makwane M.A. Ananda 1
- On the advantages of the non-concave penalized likelihood model selection method with minimum prediction errors in large-scale medical studies
A. Karagrigoriou, C. Koukouvinos and K. Mylona 13
- On the Bayesian analysis of the mixture of power function distribution using the complete and the censored sample
M. Saleem, M. Aslam and P. Economou 25
- Bayesian Procrustes analysis with applications to hydrology
Athanasios C. Micheas and Yuqiang Peng 41
- Eliminating the omitted variable bias by a regime-switching approach
Andrea Beccarini 57
- A new generation of process capability indices
A. Parchami and M. Mashinchi 77
- The analysis of dependence for three ways contingency tables with ordinal variables: A case study of patient satisfaction data
Biagio Simonetti, Eric J. Beh and Luigi D'Ambra 91
- Optimization of a product performance using mixture experiments
L.H.A. Dal Bello and A.F.C. Vieira 105
- Identifying the time of step change in the mean of autocorrelated processes
Marcus B. Perry and Joseph J. Pignatiello, Jr. 119
- A new approach to classification
R. Fuentes-García and S.G. Walker 137
- Inference on C_{pk} for autocorrelated data in the presence of random measurement errors
Michele Scagliarini 147

Generalized linear spatial models in epidemiology: A case study of zoonotic cutaneous leishmaniasis in Tunisia <i>K. Ben-Ahmed, A. Bouratbine and M.-A. El-Aroui</i>	159
Generalized Gumbel distribution <i>Kahadawala Cooray</i>	171
A Bayesian approach in differential equation dynamic models incorporating clinical factors and covariates <i>Yangxin Huang</i>	181
Estimating the Hurst parameter in financial time series via heuristic approaches <i>Chin Wen Cheong</i>	201
Testing for spurious and cointegrated regressions: A wavelet approach <i>Chee Kian Leong and Weihong Huang</i>	215
Software modules categorization through likelihood and bayesian analysis of finite dirichlet mixtures <i>Nizar Bouguila, Jian Han Wang and A. Ben Hamza</i>	235
Bayesian hierarchical model for the prediction of football results <i>Gianluca Baio and Marta Blangiardo</i>	253
The exchange rate risk of Chinese yuan: Using VaR and ES based on extreme value theory <i>Zongrun Wang, Weitao Wu, Chao Chen and Yanju Zhou</i>	265
Investigation of the diesel consumption for trucks at an overburden stripping area by SPC study <i>Hamdi Akcakoca and Nurhak Sutcu</i>	283
Assessment of acceptance sampling plans using posterior distribution for a dependent process <i>A. Erhan Mergen and Z. Seyda Deligonul</i>	299
Support vector regression based residual control charts <i>Walid Gani, Hassen Taleb and Mohamed Limam</i>	309
Gibbs sampling in DP-based nonlinear mixed effects models <i>Jing Wang</i>	325
Characterizing persistent disturbing behavior using longitudinal and multivariate techniques <i>Jan Serroyen, Liesbeth Bruckers, Geert Rogiers and Geert Molenberghs</i>	341
Book review	357
