

JOURNAL OF APPLIED STATISTICS

Volume 37 Numbers 3–4 March–April 2010

CONTENTS

- Liquidity spreads in the corporate bond market:
Estimation using a semi-parametric model
Jung Hsien Chang and Mao Wei Hung 359
- Construction and selection of tightened–normal–tightened
variables sampling scheme of type TNTVSS $(n_1, n_2; k)$
D. Senthilkumar and D. Muthuraj 375
- On the comparison of the Fisher information of the
log-normal and generalized Rayleigh distributions
*Fawziah S. Alshunnar, Mohammad Z. Raqab and
Debasis Kundu* 391
- A double acceptance sampling plan for generalized
log-logistic distributions with known shape parameters
Muhammad Aslam and Chi-Hyuck Jun 405
- Le Cam theorem on interval division by randomly chosen
points: Pedagogical explanations and application to
temporal cluster detection
Christophe Demattei 415
- Interval estimation of a small proportion via inverse
sampling
Ling-Yau Chan and Rahul Mukerjee 425
- On the skew-normal calibration model
*C.C. Figueiredo, H. Bolfarine, M.C. Sandoval and
C.R.O.P. Lima* 435
- A variables repetitive group sampling plan under
failure-censored reliability tests for Weibull distribution
*Chi-Hyuck Jun, Hyeseon Lee, Sang-Ho Lee and
S. Balamurali* 453
- A note on some modified Pulak and Al-Sultan's model
Chung-Ho Chen 461
- A skew-normal factor model for the analysis of student
satisfaction towards university courses
Angela Montanari and Cinzia Viroli 473

(Contents continued on inside back cover)

0266-4763(2010)37:3/4;1-V

A distance-based rounding strategy for post-imputation ordinal data <i>Hakan Demirtas</i>	489
Application of a Markovian process to the calculation of mean time equilibrium in a genetic drift model <i>Martin Ríos and Toni Monleón-Getino</i>	501
Bayesian analysis for bivariate von Mises distributions <i>Kanti V. Mardia</i>	515
The cross-product ratio in bivariate lognormal and gamma distributions, with an application to non-randomized trials <i>Paul D. Baxter and Paul R. Marchant</i>	529
The diagnostic accuracy of a composite index increases as the number of partitions of the components increases and when specific weights are assigned to each component <i>Georgia Kourlaba and Demosthenes Panagiotakos</i>	537
Time truncated acceptance sampling plans for generalized exponential distribution <i>Muhammad Aslam, Debasis Kundu and Munir Ahmad</i>	555
Geometric sample size determination in Bayesian analysis <i>M.M. Nassar, S.M. Khamis and S.S. Radwan</i>	567
The eigenstructure of block-structured correlation matrices and its implications for principal component analysis <i>Jorge Cadima, Francisco Lage Calheiros and Isabel P. Preto</i>	577
Approximate inference in heteroskedastic regressions: A numerical evaluation <i>Francisco Cribari-Neto and Maria da Glória A. Lima</i>	591
On MLEs of the parameters of a modified Weibull distribution for progressively type-2 censored samples <i>H. Jiang, M. Xie and L.C. Tang</i>	617
An optimal sign test for one-sample bivariate location model using an alternative bivariate ranked-set sample <i>Hani M. Samawi, Mohammed Al-Haj Ebrahim and Noha Al-Zubaidin</i>	629
Small area estimation of mean price of habitation transaction using time-series and cross-sectional area-level models <i>Luis Nobre Pereira and Pedro Simões Coelho</i>	651
Quantifying R^2 bias in the presence of measurement error <i>Karl D. Majeske, Terri Lynch-Caris and Janet Brelín-Fornari</i>	667
The effectiveness of coach turnover and the effect on home team advantage, team quality and team ranking <i>Anne-Line Balduck, Anita Prinzie and Marc Buelens</i>	679
Random effects models for operational patient pathways <i>Shola Adeyemi, Thierry J. Chaussalet, Haifeng Xie and Md Asaduzaman</i>	691
Book Reviews	703
