ORIGINAL PAPERS

Modeling graphs using dot product representations

E.R. Scheinerman · K. Tucker 1

Bayesian model-based tight clustering for time course data

Y. Joo · G. Casella · J. Hobert 17

Fast computing of some generalized linear mixed pseudo-models with temporal autocorrelation

J.M. Ver Hoef · J.M. London · P.L. Boveng 39

Computing p -values in conditional independence models for a contingency table

M. Kuroda · H. Hashiguchi · S. Nakagawa 57

Comparing several population means: a parametric bootstrap method, and its comparison with usual ANOVA F test as well as ANOM

C.-H. Chang · N. Pal · W.K. Lim · J.-J. Lin 71

A highly efficient L-estimator for the location parameter of the Cauchy distribution

J. Zhang 97

On the convergence of the partial least squares path modeling algorithm

J. Henseler 107

Penalized multinomial mixture logit model

S. Bashir · E.M. Carter 121

A note on variability of interval data

J. Antoch · M. Brzezina · R. Miele 143

Truncated stable random variables: characterization and simulation

A.R. Soltani · A. Shirvani 155

Empirical wavelet analysis of tail and memory properties of LARCH and FIGARCH models

A. Jach · P. Kokoszka 163
