

# Computational Statistics

26 · 3

2011

**Special Issue: Proceedings of DSC 2009**

**Guest Editors: Peter Dalgaard · Søren Højsgaard**

**Statistics in the computer age: personal reflections**

T. Tjur 371

**iPlots eXtreme: next-generation interactive graphics design and implementation of modern interactive graphics**

S. Urbanek 381

**Prospects and challenges in R package development**

S. Theußl · U. Ligges · K. Hornik 395

**Mutable objects in R**

H. Wickham 405

**Reproducible statistical analysis with multiple languages**

R. Lenth · S. Højsgaard 419

**Aspects of CXXR internals**

A.R. Runnalls 427

**maxLik: A package for maximum likelihood estimation in R**

A. Henningsen · O. Toomet 443

ORIGINAL PAPERS

**Moments of the generalized hyperbolic distribution**

D.J. Scott · D. Würtz · C. Dong · T.T. Tran 459

**Nonlinear regression modeling and detecting change points via the relevance vector machine**

S. Tateishi · S. Konishi 477

**Partially smooth tail-index estimation for small samples**

S. Müller · H. Chhay 491

**Likelihood inferences for the link function without knowing the true underlying distributions**

T.-S. Tsou 507

**Semiparametric analysis of transformation models with left-truncated and right-censored data**

P. Shen 521

**Solving genetic heterogeneity in extended families by identifying sub-types of complex diseases**

A. Tayeb · A. Labbe · A. Bureau · C. Mérette 539
