

Scientific Computing

Volume 32, Number 3

Articles originally published online April 2010 to June 2010

CONTENTS

- 1119 Higher Order Multidimensional Upwind Convection Schemes for Flow in Porous Media on Structured and Unstructured Quadrilateral Grids
Sadok Lamine and Michael G. Edwards
- 1140 Discrete Differential Forms for (1+1)-Dimensional Cosmological Space-Times
Ronny Richter and Jörg Frauendiener
- 1159 A Phase-Field Model and Its Numerical Approximation for Two-Phase Incompressible Flows with Different Densities and Viscosities
Jie Shen and Xiaofeng Yang
- 1180 Analysis of Block Parareal Preconditioners for Parabolic Optimal Control Problems
Tarek P. Mathew, Marcus Sarkis, and Christian E. Schaerer
- 1201 Weighted Matrix Ordering and Parallel Banded Preconditioners for Iterative Linear System Solvers
Murat Manguoglu, Mehmet Koyutürk, Ahmed H. Sameh, and Ananth Grama
- 1217 Blendenpik: Supercharging LAPACK's Least-Squares Solver
Haim Avron, Petar Maysounkov, and Sivan Toledo
- 1237 Optimal Control of Parameter-Dependent Convection-Diffusion Problems around Rigid Bodies
Timo Tonn, Karsten Urban, and Stefan Volkwein
- 1261 An Entropy Adjoint Approach to Mesh Refinement
Krzysztof J. Fidkowski and Philip L. Roe
- 1288 High Order Numerical Methods to Three Dimensional Delta Function Integrals in Level Set Methods
Xin Wen
- 1310 Moving Least Squares via Orthogonal Polynomials
Michael Carley
- 1323 Parallel Hybrid Preconditioning: Incomplete Factorization with Selective Sparse Approximate Inversion
Padma Raghavan and Keita Teranishi
- 1346 A Posteriori Error Estimates of Stabilization of Low-Order Mixed Finite Elements for Incompressible Flow
Haibiao Zheng, Yanren Hou, and Feng Shi
- 1361 A Parallel Geometric Multigrid Method for Finite Elements on Octree Meshes
Rahul S. Sampath and George Biros
- 1393 Compatible Relaxation and Coarsening in Algebraic Multigrid
James J. Brannick and Robert D. Falgout
- 1417 An Exponentially Convergent Nonpolynomial Finite Element Method for Time-Harmonic Scattering from Polygons
A. H. Barnett and T. Betcke
- 1442 Approximate Inverse Circulant-plus-Diagonal Preconditioners for Toeplitz-plus-Diagonal Matrices
Michael K. Ng and Jianyu Pan
- 1465 Computing Expectation Values for Molecular Quantum Dynamics
Caroline Lasser and Susanna Röblitz
- 1484 A Duality-Based Splitting Method for ℓ^1 -TV Image Restoration with Automatic Regularization Parameter Choice
Christian Clason, Bangti Jin, and Karl Kunisch

Continued on inside back cover

Continued from back cover

- 1506 **Nested Iteration and First-Order System Least Squares for Incompressible, Resistive Magnetohydrodynamics**
J. H. Adler, T. A. Manteuffel, S. F. McCormick, J. W. Ruge, and G. D. Sanders
- 1527 **A New Level Set Method for Motion in Normal Direction Based on a Semi-implicit Forward-Backward Diffusion Approach**
Karol Mikula and Mario Ohlberger
- 1545 **Wavelet Galerkin Schemes for Multidimensional Anisotropic Integrodifferential Operators**
C. Winter
- 1567 **A Posteriori Error Estimates Including Algebraic Error and Stopping Criteria for Iterative Solvers**
Pavel Jiránek, Zdeněk Strakoš, and Martin Vohralík
- 1591 **Surface Reconstruction and Image Enhancement via L^1 -Minimization**
Veselin Dobrev, Jean-Luc Guermond, and Bojan Popov
- 1617 **Adaptive Timestep Control for Nonstationary Solutions of the Euler Equations**
Christina Steiner, Siegfried Müller, and Sebastian Noelle
- 1652 **Recursively Accelerated Multilevel Aggregation for Markov Chains**
H. De Sterck, K. Miller, G. Sanders, and M. Winlaw
- 1672 **A Simplified and Flexible Variant of GCROT for Solving Nonsymmetric Linear Systems**
Jason E. Hicken and David W. Zingg
