

INVITED PAPER

- 211 N. Balakrishnan
Progressive censoring methodology: an appraisal

DISCUSSION

- 260 H.N. Nagaraja (comment)
262 A. Dembińska (comment)
265 E. Castillo • J.M. Sarabia (comment)
268 B.C. Arnold (comment)
271 U. Kamps • E. Cramer (comment)
276 D. Kundu (comment)
279 O. Guilbaud (comment)
282 P.C. Joshi (comment)
284 U. Balasooriya • C.-K. Low (comment)
287 H.K.T. Ng • P.-S. Chan (comment)
290 N. Balakrishnan (rejoinder)

ORIGINAL PAPERS

- 297 C. Neves • M.I. Fraga Alves
Semi-parametric approach to the Hasofer–Wang and Greenwood statistics in extremes
- 314 J. Dauxois • G.M. Nkiet • Y. Romain
On invariance in canonical analysis with applications to covariate discriminant analysis
- 333 R.M. Assunção • P.A. Ferrari
Independence of thinned processes characterizes the Poisson process: An elementary proof and a statistical application
- 346 A. Saha
Optional randomized response in stratified unequal probability sampling—A simulation based numerical study with Kuk's method
- 355 R. Cao • I. López-de-Ullibarri
Product-type and presmoothed hazard rate estimators with censored data
- 383 F. Gamboa • J.-M. Loubes
Estimation of parameters of a multifractal process
