Other Site Characteristics

Los rasgos principales del lugar vienen definidos por la descripción en sus clases de hábitats.

4.2 Quality and importance

Su importancia radica en el índice de naturalidad del espacio, su carácter de "isla" boscosa dentro de un contexto semiárido y albergue de situaciones de ecotonía entre los paisajes vegetales Béticos y Murciano Almerienses, situaciones que hacen de este espacio un importante lugar para que se produzcan fenómenos de especiación. También sobresalen por sus comunidades orníticas entre las que destacan las rapaces en general, tanto las nidificantes como las de paso y dentro de éstas las de preferencia forestal, muy escasas en la provincia. En general su pie de monte es un área de excepcional relevancia para las poblaciones de aves estepáricas, siendo de singular interés su carácter de corredor de soporte de las pequeñas migraciones otoñales-invernales y primaverales-estivales, entre la línea de costa y los ambientes semiáridos interiores, del camachuelo trompetero.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site
