- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)

- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Species					Population in the site					Site assessment

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

4.2 Quality and importance

Sistema serrano de reducidas dimensiones y potente relieve afectado por una climatología propia de los ambientes semiáridos del suroeste peninsular que se ve suavizada por los tipos ciclónicos del Levante. De variada litología dominan en ella los materiales carbonatados, las formaciones de yesos y materiales metamórficos (cuarcitas) y sedimentarios (conglomerados) que configuran su orla basal. La diversidad litológica y las peculiaridades climáticas se suman a su abrupta topografía para determinar un paisaje

vegetal único en el que algunas de las mejores comunidades de *Pinus halepensis*, *Periploca laevigata* y *Ziziphus lotus*, así como sus matorrales de sucesión, muy especialmente los vinculados a sustratos yesíferos, albergan un excepcional registro florístico, con múltiples elementos endémicos en el que gramíneas, cistáceas y leguminosas resultan los elementos diferenciadores del paisaje. Territorio de campeo del aguila perdicera, el paisaje descrito alberga una de las poblaciones autóctonas, de mayor densidad y mejor vitalidad, de *Tortuga mora* (*Testudo graeca*). Esta joya de la fauna ibérica resulta sin duda el elemento más relevante de este territorio serrano preitoral haciéndose presente es su toponimia "Cerro de la tortuga". Junto a ella una comunidad sobresaliente de réptiles, un espléndido catálogo de aves y un inventario apenas iniciado de invertebrados configuran la descripción faunística del espacio.
