- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Los rasgos principales del lugar vienen definidos por la descripción en sus clases de hábitats.

4.2 Quality and importance

Espacio serrano prelitoral en el que la influencia de los tipos ciclónicos de levante suaviza su neta caracterización semiárida, incorporando elementos típicos de las regiones biogeográficas levantinas. De escasa relevancia superficial, este sistema configurado por cinco relieves encadenados (Cuerda de las Palomas, Sierra del Aguilón, Sierra de los Pinos, Sierra del Castillarico y Sierra Almagrera), se alinean de

forma paralela a la línea de costa, configurando en el último de los relieves citados un espectacular acantilado litoral. La diversidad de sus recursos geológicos y su abrupta topografía, resultan determinantes junto a la ausencia de vías de acceso, de su elevado índice de naturalidad. Espléndidas formaciones de *Pinus halepensis* en las umbrías de las sierras de los Pinos y el Castillarico, excepcionales comunidades de *Periploca laevigata* en las solanas del Aguilón, los Pinos y Almagrera, abundantes azufaifares en el piedemonte del Aguilón y Almagrera, son junto a los matorrales de sustitución (espartales y tomillares, estepas salinas) y las comunidades rupícolas, los paisajes más significativos del territorio. Este paisaje mediterráneo semiárido es refugio de una de las últimas poblaciones autóctonas, bien conservadas y de magnífica vitalidad, de una de las joyas de la fauna ibérica: la Tortuga mora. Junto a ellas otros elementos de indudable valor en el contexto europeo como el Erizo moruno y el Lagarto ocelado, configuran un catálogo faunístico en el que reptiles, aves de estepa y una espléndida comunidad de invertebrados son los verdaderos protagonistas.
