4.2 Quality and importance

Este espacio es un agrosistema extensivo en el que abundan las dehesas con intercalación de pequeñas sierras. Contiene uno de los dos núcleos reproductores más importantes de Andalucía para la avutarda. En invierno, se constituye en el primer núcleo de la Comunidad Autónoma para esta especie. Además de la avutarda, el espacio acoge una rica y variada avifauna de interés, con importantes poblaciones de aves esteparias (sisón, aguilucho cenizo, cernícalo primilla, ganga ortega, alcaraván, calandria, cogujada montesina). Asimismo, existen otras especies de aves que incrementan notablemente la diversidad de la zona, como las águilas reales, perdicera e imperial, alimoche, cigüeña negra, elanio azul. Es especialmente desatacable la invernada de la grulla en este espacio, ya que se acoge uno de los principales contingentes de invernada de la especie en Andalucía
