- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Los rasgos principales del lugar vienen definidos por la descripción en sus clases de hábitats.

4.2 Quality and importance

El Paraje Natural del Alto Guadalquivir, constituido por tres embalses prácticamente colmatados hasta su completa capacidad y los tramos de río comprendidos entre ellos, constituye un espacio en el que se funden dos sistemas: uno natural (río, bosque galería, sotos de ribera) y otro artificial (embalses colmatados, vegetación palustre emergente), dando lugar a dos dinámicas acuáticas, una lótica y otra léntica. La riqueza biológica de este espacio "doble" es, potencialmente, más alta que la que presentarían cada uno de los dos sistemas por separado, y ello se refleja en la variada y numerosa representación de aves ligadas a los medios acuáticos, entre las que destaca el calamón (Porphyrrio porphyrio) con más de 300 parejas reproductoras, lo que llevo a SEO-ICONA a reconocer la importancia ornitológica de este área catalogándola como Zona Húmeda de Importancia Internacional. Área de embalses y vegetación palustre con importante población nidificante de Calamón Común (Porphyrrio porphyrio), Aguilucho Lagunero (Circus aeruginosus) y Avoceta Común (Recurvirostra avosetta, también en invernada). Presencia de Malvasía Cabeciblanca (Oxyura leucocephala) en invernada y en paso.
