Other Site Characteristics

Los rasgos principales del lugar vienen definidos por la descripción en sus clases de hábitats.

4.2 Quality and importance

Laguna Grande es, en realidad, un embalse de regulación de aguas para riego del olivar circundante al que llegaban las aguas del próximo río Torres y que, con el paso del tiempo y como consecuencia de los aportes de sedimentos, se ha ido colmatando y modificando su fisionomía, presentando actualmente, además de la lámina de agua, unas formaciones vegetales de porte arbóreo muy importantes tanto para la avifauna, ya sea acuática o del olivar circundante, como para los mamíferos de la zona, que encuentran en ellas un refugio idóneo. Esta laguna ha constituido, y constituye, un importantísimo lugar para la avifauna acuática, como lo demuestran los sucesivos censos y anillamientos que se vienen realizando desde 1965, habiéndose detectado la presencia de la amenazada cerceta pardilla (*Marmaronetta angustirostris*) o de la malvasía cabeciblanca (*Oxyura leucocephala*).

4.3 Threats, pressures and activities with impacts on the site
