Other Site Characteristics

Los rasgos principales del lugar vienen definidos por la descripción en sus clases de hábitats.

4.2 Quality and importance

Desde el punto de vista natural, la importancia de la "Cuencas del Rumbiar, Guadalen y Guadalmena" radica en la presencia de formaciones vegetales , típicas de monte mediterráneo, algunas de ellas en buen estado de conservación, así como la existencia de especies faunísticas de especial interés por su escasez. Entre las primeras cabe destacar masa mixtas de Quercus, entre las que destacan Quercus ilex, Quercus suber y Quercus faginea, con reductos puntuales de Quercus pyrenaica , que dan cobijo a un sotobosque de matorral noble mediterráneo (madroño, brezo, lentisco, cornicabra , agracejo, labiarnago,coscoja,etc.). Es de destacar asimismo la presencia testimonial de algunas especies de Aceres y Serbales. También tienen gran importancia en la zona las masas de Pinus pinea y Pinus pinaster procedentes de repoblación, así como las formaciones de bosques en galería en los cursos de agua que nutren las tres cuencas. En lo relativo a la fauna cabe destacar la existencia de diversas especies cinegéticas (ciervos, jabalíes,gamos,conejos, etc.), así como la presencia aislada de algunos ejemplares de mamíferos protegidos como lobo, linco, meloncillo, etc., y de aves rapaces de especial interés tales como aguila imperial, aguila real, buitre leonado, azor, buho real etc...
