OPTION B: ZODIAC SIGNS **KEY**

- 1 If someone you know tells you they are no longer a Scorpio and they are an Ophiuchus now, they are probably not
- 2 the only one. 86% of us may not be the star sign we thought. Everything you thought you knew about astrology just
- 3 changed after NASA revealed that there are actually thirteen zodiac signs. After doing some calculations and taking
- 4 into account that the earth's axis no longer points in the same direction, NASA concluded that the horoscope signs as
- 5 we know them have completely different date ranges now. So where did we go wrong?
- 6 Some 3,000 years ago, the Babylonians thought that the changing positions of constellations throughout the year
- 7 could be linked to certain behaviours or events on Earth. And so they invented the zodiac: the circle of twelve
- 8 constellations based on the apparent path that the Sun takes across an imagined celestial sphere over the course of
- 9 the year. In fact, the thirteenth sign is not a new discovery. Even according to the Babylonians' own ancient stories,
- 10 there were thirteen constellations. It's just that the Babylonians drew up a plan for the signs of the zodiac to correspond
- 11 with their calendar, which was based on the phases of the Moon and thus only contained twelve months. So they left
- 12 out poor Ophiuchus, which takes its name from a Greek term meaning 'serpent-bearer' (this sign is commonly
- 13 represented as a man grasping a snake).
- 14 Presumably, each person has a different relationship with their sign and horoscope, but as NASA has shown, the
- 15 Babylonians cheated a bit. Astrology isn't real and can be challenged by its science counterpart, astronomy.
