This work has been funded by the Environment Andalusian Regional Government. Many of the background ideas and results have been developed in the framework of the projects *Characterisation of structure and functionality of landscape lineal elements in Guadimar river basin* (Andalusian Regional Government); *Connectivity and landscape heterogeneity as environmental indicators for the design and management of conservation networks* (Spanish Environmental Ministry. REN2001-0972) and *Influence of landscape permeability on biodiversity: application to landscape policies and ecological networks* (Madrid Self-governing Region. 07M/0063/2001).
