- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Other Site Characteristics

Desde el punto de vista morfogénético, destacan las formas de origen fluvio-coluvial, generadas por procesos de erosión-acumulación causados por la red hidrográfica, dando lugar a morfologías muy características en las que predominan las llanuras y planos inclinados. Las fisiografías de vegas y llanuras de inundación, vinculadas a los cursos de los ríos y arroyos, son las más representativas. También es importante el sistema morfogénético denudativo (colinas y cerros sobre trías con yesos).

4.2 Quality and importance

Luciobarbus sclateri (barbo gitano), especie aunque no de interés comunitario, sí merece especial mención. Fué identificado en el 2009. Puede verse afectado por la proliferación de peces alóctonos,
